ABSTRACTED-PUB-NO: JP 03279452A

BASIC-ABSTRACT:

Non-woven sheet is a fibre sheet comprising blending very fine fibre consisting of polyethylene(PE) and polypropylene(PP) with a fibre contg. at least one part PE or PP and having coarser average fibre size than that of the very fine fibre at a random state. The coarse fibre and the very fine fibre should be at least partially combined. The fibre is then subjected to electret processing to form the sheet. The PE has melt flow rate of more than 30 and the PP has melt flow rate of more than 50. Average fibre size of the very fine fibre is 0.1-8.0 microns. The non-woven sheet after electret processing, has surface electric charge density of more than 2 x 10 power(-10) coulomb.

USE/ADVANTAGE - Sheet has good high tensile strength without reducing of filtering, bacteria-barrier properties, stain-absorbing, liq.-absorbing and heat-insulating properties. It is pref. used for a filter, wiper or wrapping materials.
